Motivation

SPDC

Energy conservation

$$\omega_p = \omega_s + \omega_i$$

Momentum conservation

$$\vec{k}_p = \vec{k}_s + \vec{k}_i - \Delta \vec{k}$$

Transmittance model

Conventional approach:

$$N_{\text{tot}}^{\text{ref}} = \eta_{\text{idl}} N_{\text{g}} + N_{\text{noise}}^{\text{ref}}$$

$$N_{\text{tot}}^{\text{sam}} = T \eta_{\text{idl}} N_{\text{g}} + N_{\text{noise}}^{\text{sam}}$$

Coincidence approach:

$$N_{\text{cc}}^{\text{pure,sam}} = T \eta_{\text{idl}} \eta_{\text{sig}} N_{\text{g}},$$

$$N_{\text{cc}}^{\text{pure,ref}} = \eta_{\text{idl}} \eta_{\text{sig}} N_{\text{g}}$$

Conventional approach

$$N_{\text{tot}}^{\text{ref}} = \eta_{\text{idl}} N_g + N_{\text{noise}}^{\text{ref}}$$

Conventional approach

$$N_{\text{tot}}^{\text{ref}} = \eta_{\text{idl}} N_g + N_{\text{noise}}^{\text{ref}}$$

$$N_{\text{tot}}^{\text{sam}} = T \eta_{\text{idl}} N_g + N_{\text{noise}}^{\text{sam}}$$

Conventional approach

$$N_{\text{tot}}^{\text{ref}} = \eta_{\text{idl}} N_g + N_{\text{noise}}^{\text{ref}}$$

$$N_{\text{tot}}^{\text{sam}} = T \eta_{\text{idl}} N_g + N_{\text{noise}}^{\text{sam}}$$

$$\Rightarrow T = \frac{N_{\text{tot}}^{\text{sam}} - N_{\text{noise}}^{\text{sam}}}{N_{\text{tot}}^{\text{ref}} - N_{\text{noise}}^{\text{ref}}}$$

Coincidence approach

$$N_{cc,tot}^{ref} = \eta_{idl} \eta_{sig} N_g + N_{ac}^{ref}$$

Coincidence approach

$$N_{cc,tot}^{ref} = \eta_{idl} \eta_{sig} N_g + N_{ac}^{ref}$$

$$N_{cc,tot}^{sam} = T \eta_{idl} \eta_{sig} N_g + N_{ac}^{sam}$$

Coincidence approach

$$N_{cc,tot}^{ref} = \eta_{idl} \eta_{sig} N_g + N_{ac}^{ref}$$

$$N_{cc,tot}^{sam} = T \eta_{idl} \eta_{sig} N_g + N_{ac}^{sam}$$

$$\Rightarrow T = \frac{N_{tot,cc}^{sam} - N_{ac}^{sam}}{N_{tot,cc}^{ref} - N_{ac}^{ref}}$$

Transmittance model

Conventional approach:

$$\text{Var}(\mathcal{T}) = \left(\frac{1}{\eta_{\text{idl}} N_{\text{g}}} \right)^2 \left[\text{Var}(N_{\text{tot}}^{\text{sam}}) + \text{Var}(N_{\text{noise}}^{\text{sam}}) + \mathcal{T}^2 \left[\text{Var}(N_{\text{tot}}^{\text{ref}}) + \text{Var}(N_{\text{noise}}^{\text{ref}}) \right] \right]$$

Coincidence approach:

$$\text{Var}(\mathcal{T}) = \left(\frac{1}{\eta_{\text{sig}} \eta_{\text{idl}} N_{\text{g}}} \right)^2 \left[\text{Var}(N_{\text{tot,cc}}^{\text{sam}}) + \text{Var}(N_{\text{ac}}^{\text{sam}}) + \mathcal{T}^2 \left[\text{Var}(N_{\text{tot,cc}}^{\text{ref}}) + \text{Var}(N_{\text{ac}}^{\text{ref}}) \right] \right]$$

Transmittance model

Conventional approach:

$$\text{Var}(T) = \left(\frac{1}{\eta_{\text{idl}} N_g} \right)^2 \left[\text{Var}(N_{\text{tot}}^{\text{sam}}) + \text{Var}(N_{\text{noise}}^{\text{sam}}) + T^2 \left[\text{Var}(N_{\text{tot}}^{\text{ref}}) + \text{Var}(N_{\text{noise}}^{\text{ref}}) \right] \right]$$

Coincidence approach:

$$\text{Var}(T) = \left(\frac{1}{\eta_{\text{sig}} \eta_{\text{idl}} N_g} \right)^2 \left[\text{Var}(N_{\text{tot,cc}}^{\text{sam}}) + \text{Var}(N_{\text{ac}}^{\text{sam}}) + T^2 \left[\text{Var}(N_{\text{tot,cc}}^{\text{ref}}) + \text{Var}(N_{\text{ac}}^{\text{ref}}) \right] \right]$$
